22222222.....	32
11. Create a simple web page to display the Date properties (year, month, day, hour, minute, second, millisecond etc.) as well as to display the number of days of the year between two specified years..	34
12. Create a web page containing the student details (RollNo, Name, Class, Phone, Email) and show result using Data binding and dropdown list control .....	35
14. Create a simple web page to demonstrate all string operations.....	37
15. Design an asp.net webpage with 2 groups of Radio Buttons, DropDownList, label and TextBox to perform the following operations:- On click of Radio Buttons each at the same time from two different groups, change the font-size and font-face of the label's Text. Also on the same web pages show that, on selecting a country name from the dropdown list, its respective country code gets displayed in a text box .....	40
14. Create a delegate del1. Create display1() and display2() static methods. Create a simple application to call these two methods by the thread through the delegate.....	43
15. Create a simple web page to show how to write and read a cookie from a client's computer. ....	45
16. Create a web application to demonstrate use of HtmlEditorExtender Ajax control .....	47
17. Create a web application to demonstrate use of MasterPage with applying Styles and Themes for page beautification .....	47
18. Create a web application to demonstrate Form Security and Windows Security with proper Authentication and Authorization properties. ....	54
19. Create a web application to demonstrate Grid View paging and Creating own table format using Grid View .....	58
20. Create a web application to bind data in a multiline text box by querying in another text box. ....	60
22. Write a program to create a DLL to print a factorial of a number. ....	62
23. Write an Application to.....	64
1. Generate Fibonacci series.....	64
2. Test for prime numbers .....	64
3. Test for vowels.....	64
4. Reverse a number .....	64
23. Create a simple web page to demonstrate use of built in DivideByZeroException and IndexOutOfRangeException exceptions using text box and label control .....	66
24. Create a simple web page to show data in Tree view control and data list using web. Sitemap file containing navigation information .....	68
25. Display the no. of visitors on a given web page.....	70
27. Create a registration form having text fields for accepting, Name, Age, Email, Address and Mobile number. Perform the following validations for the same: .....	72
1. All fields need to be filled compulsorily .....	72

2. Nameshouldcontainonlyalphabetsandshouldnotbemorethan 25 characterslong.....	72
3. Validateemailandmobilenumberappropriately .....	72
4. Ageshouldbebetween18and32only .....	72
Include submit and cancel buttons. On click of submit button, open a new page and display all theinformationenteredbytheuserandonclickofcancelbutton,alltextfieldsshouldbecleared. ....	72
30. Create a webpage with multiline textbox and two buttons, viz. saveContents and loadContents.On click of saveContents button, contents from the textbox should be retained and on click ofloadContentsbutton,thepreviouslysavedcontentsshouldbedisplayedbackonthetextbox. ....	77
Codes:.....	77
31. Store 3 objects of the furniture class having 3 data members (name, manufacturer, and cost) in 3session objects. Display a panel to include a listbox displaying the names of all three furnitureobjects, and a button named “MoreInformation”. On click of the button retrieve the selected object(fromlistbox)informationanddisplayitinalabel .....	79
32. WriteaprograminC#todemonstratemultipleinheritanceusinginterfaces.....	82

# 1. Create an XML document for student database and apply the stylesheet effects and display on webpage

## Student.xml:

```
<?xml version="1.0" encoding="UTF-8"?>

**1. Onclick of a button control display the selected items from the listbox in atextbox. Also in the same webpage display the name of the selected item from theDropDownList1 in a label. Also change the font size of the same label accordingtothefontsizesselectedfromthedropdownlist2.**

The screenshot shows a Visual Studio IDE with a web form titled "Default.aspx". The form contains the following controls:

- A dropdown menu with the text "body" above it. The dropdown list is open, showing the following items: Satyam, Shivam, Sundaram, and Sattie.
- A button labeled "Button".
- A text box.
- A label with the text "Label".
- A numeric spinner control showing the value "10".

    {
        TimeSpan ts = Calendar1.SelectedDate -
        Calendar2.SelectedDate; Label1.Text = ts.TotalDays.ToString();
    }
}

```

## 7. Create Web Form to demonstrate use of User Control. Create

**footer named user control having copyright reserved (ex. “©company name”) and use it in a webpage.**

#### **footer.ascx**

```
<%@ControlLanguage="C#"AutoEventWireup="true"CodeFile="Footer.ascx.cs"Inherits="Footer"%>
<div style="font-family: 'Arial Black'; font-size: xx-large; font-weight: 200; font-style: normal; font-variant: small-caps; text-transform: uppercase; color: #FF0000; line-height: inherit; vertical-align: middle; text-align: justify; text-indent: inherit; white-space: pre; word-spacing: inherit; letter-spacing: inherit; background-color: #00FFFF; background-image: inherit; background-repeat: repeat-x; background-attachment: scroll; background-position: centercenter; border: thick double #008000; padding: inherit; margin: inherit; position: fixed; z-index: inherit; width: inherit; height: inherit; visibility: visible; display: table-column; float: none; clear: both; cursor: move; table-layout: fixed">@CopyrightSatyam.com
</div>
```

#### **Default.aspx:**

```
<%@PageLanguage="C#"AutoEventWireup="true"CodeFile="Default.aspx.cs"Inherits="_Default"%>

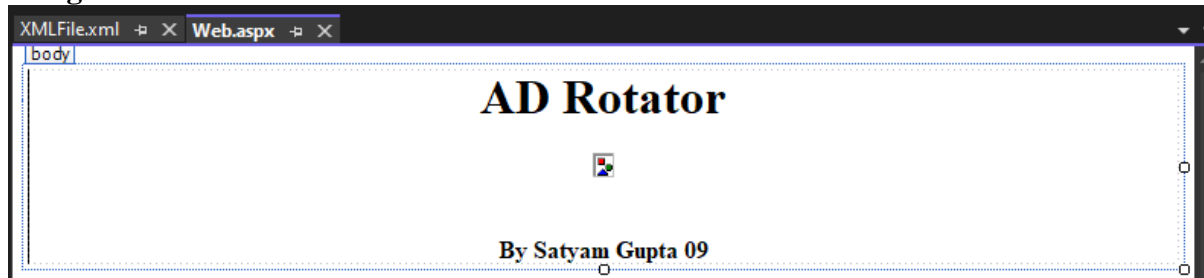

<%@Registersrc="Footer.ascx"tagname="Footer"tagprefix="uc1"%>

<!DOCTYPEhtml>

<htmlxmlns="http://www.w3.org/1999/xhtml">
<headrunat="server">
  <title></title>
  <styletype="text/css">
    .auto-style1 {
      text-align:
        center; color: #3366FF;
    }
  </style>
</head>
<body>
  <formid="form1"runat="server">
    <divclass="auto-style1">
      <h1><strong>SatyamGupta</strong></h1>
    </div>
    <uc1:FooterID="Footer1"runat="server"/>
  </form>
</body>
</html>
```

## 8. Create Web Form to demonstrate use of AdRotator Control with five advertisements. Also demonstrate how keyword filter works.

### Design:

### Code:

```
<body>
  <form id="form1" runat="server">
    <div class="auto-style1">
      <h1 style="text-align:center">ADRotator</h1>
      <h4>
        <asp:AdRotator AdvertisementFile="~/XMLFile.xml" ID="AdRotator1" runat="server" Target="_blank"/>
      <br/>
      <br/>
      <br/>
      BySatyamGupta09</h4>
    </div>
  </form>
</body>
```

### Web.xml

```
<?xml version="1.0" encoding="utf-8"?>
<Advertisements>
  <Ad>
    <ImageUrl>~/Pic/TMKOC.jpg</ImageUrl>
    <Height>300px</Height>
    <Width>550px</Width>

    <NavigateUrl>https://www.youtube.com/c/TaarakMehtaKaOoltahChashmah</NavigateUrl>
    <AlternateText>
      TarakMehta kaOolta Chashma
    </AlternateText>
    <Impressions>20</Impressions>
    <Keyword>FamilyShow</Keyword>
  </Ad>

  <Ad>
    <ImageUrl>~/Pic/the-kapil-sharma-show.jpg</ImageUrl>
    <Height>300px</Height>
    <Width>550px</Width>
    <NavigateUrl>https://www.youtube.com/c/KapilSharmaK9</NavigateUrl>
    <AlternateText>Watch the show</AlternateText>
    <Impressions>15</Impressions>
    <Keyword>ComedyShow</Keyword>
  </Ad>
```

</Advertisements>

## 9. Create XML file employees with nodes (eid, ename, edept, salary). Bind the eid and ename to a dropdown list and the ename should be in the ascending order.

### Source Code:

```
<%@Page Language="C#" AutoEventWireup="true" CodeFile="Default.aspx.cs" Inherits="_Default"%>
```

```
<!DOCTYPE html>

<html xmlns="http://www.w3.org/1999/xhtml">
<head runat="server">
    <title></title>
    <style type="text/css">
        .auto-style1 {
            text-align: center;
        }
    </style>
</head>
<body>
    <form id="form1" runat="server">
        <div class="auto-style1">
            <asp:DropDownList ID="DropDownList1" runat="server">
            </asp:DropDownList>
            <br/>
            <br/>
            RollNo:09
        </div>
    </form>
</body>
</html>
```

### Cs Code:

```
using System;
using
System.Collections.Generic; using
System.Linq;
using
System.Web; using Syst
em.Web.UI;
using
System.Web.UI.WebControls; using
System.Data;
public partial class _Default : System.Web.UI.Page
{
    protected void Page_Load(object sender, EventArgs e)
    {
        DataSet ds = new
        DataSet(); ds.ReadXml("C:\\Users\\Admin\\source\\repos\\P9\\P9\\XMLF
ile.xml"); ds.Tables[0].DefaultView.Sort = "ename"; // For Ascending
        Order DropDownList1.DataSource = ds.Tables[0]; DropDownList1.DataT
extField = "ename"; DropDownList1.DataValueField =
        "eid"; DropDownList1.DataBind();
    }
}
```

```
<input type="hidden" name="__VIEWSTATEGENERATOR" id="__VIEWSTATEGENERATOR" value="CA0B0334" />
<input type="hidden" name="__EVENTVALIDATION" id="__EVENTVALIDATION" value="j/f8Ms26o8sTqg6Mn5aYsVh
</div>

```

## Create a web application to bind data in a multiline text box by querying in another text box.

### Design:

### Code:

```
<%@PageLanguage="C#" AutoEventWireup="true" CodeFile="Default2.aspx.cs" Inherits="Default2"%>
```

```
<!DOCTYPEhtml>
```

```
<htmlxmlns="http://www.w3.org/1999/xhtml">
```

```
<headrunat="server">
```

```
<title></title>
```

```
</head>
```

```
<body>
```

```
<formid="form1"runat="server">
```

```
<div>
```

```
<asp:TextBox ID="TextBox2" Text="<%textdata %>" runat="server"
```

```
TextMode="MultiLine"Height="67px"Width="199px">&lt;%textdata %&gt;</asp:TextBox>
```

```
<asp:TextBox ID="TextBox3" runat="server"
```

```
AutoPostBack="True"OnTextChanged="TextBox3_TextChanged"></asp:Text  
extBox>
```

```
</div>
```

```
</form>
```

```
</body>
```

```
</html>
```

### C#code:

```
usingSystem;
```

```
using
```

```
System.Collections.Generic;using
```

```
System.Linq;
```

```
using
```

```
System.Web;usingSyst
```

```
em.Web.UI;
```

```
usingSystem.Web.UI.WebControls;
```

```
publicpartialclassDefault2 :System.Web.UI.Page
```

```
{
```

```
    publicstringtextdata;
```

```
    protectedvoidPage_Load(objectsender,EventArgs)
```

```
    {
```

```
    }
```

```
    protectedvoidTextBox3_TextChanged(objectsender,EventArgs)
```

```
    {
```

```
        textdata=TextBox3.Text;t
```

```
        his.DataBind();
```

```
    }
```

```
}
```

## Design:

**ClassLibrary:**

}

```
using System.Collections.Generic;
```

```
using
System.Linq;using
System.Web;usingSyst
em.Web.UI;
using
System.Web.UI.WebControls;using
ClassLibrary1;
publicpartialclass_Default:System.Web.UI.Page
{
    protectedvoidPage_Load(objectsender,EventArgs)
    {

    }

    protectedvoidButton1_Click(objectsender,EventArgs)
    {
        Class1c=new Class1();
        TextBox2.Text=c.fact(Convert.ToInt32(TextBox1.Text));
    }
}
```

## 23. Write an Application to:

1. Generate Fibonacci series
2. Test for prime numbers
3. Test for vowels
4. Reverse a number

### Design:

### Code:

```
<%@PageLanguage="C#" AutoEventWireup="true" CodeFile="Default3.aspx.cs" Inherits="Default3"%>

<!DOCTYPE html>

<html xmlns="http://www.w3.org/1999/xhtml">
<head runat="server">
  <title></title>
</head>

            Label1.Text+=TextBox1.Text[i];
        }
    }
}

```

## 23. Create a simple web page to demonstrate use of built-in DivideByZeroException and IndexOutOfRangeException exceptions using textbox and label control.

Default.aspx:

```
<%@PageLanguage="C#" AutoEventWireup="true" CodeFile="Default2.aspx.cs" Inherits="Default2"%>

<!DOCTYPEhtml>
<htmlxmlns="http://www.w3.org/1999/xhtml">
<headrunat="server">
    <title></title>
</head>
<body>
    <formid="form1" runat="server">
        <div>
            <asp:ButtonID="Button1" runat="server"OnClick="Button1_Click"Text="Button"/>
        </div>
    </form>
</body>
</html>
```

Code:

```
usingSystem;
using
System.Collections.Generic;using
System.Linq;
using
System.Web;usingSyst
em.Web.UI;
usingSystem.Web.UI.WebControls;

publicpartialclassDefault2 :System.Web.UI.Page
{
    protectedvoidPage_Load(objectsender,EventArgs)
    {

    }

    protectedvoidButton1_Click(objectsender,EventArgs)
    {
        try
        {
            string[] arr = new
            string[3];arr[0]="a";
            arr[1]="b";
            arr[2]="c";

            int a =
            10;int b =
            20;intc= a
            /b;
        }
        catch(IndexOutOfRangeExceptionior)
        {
            Response.Write(ior.ToString());
        }
        catch(DivideByZeroExceptiondbz)
        {
            Response.Write(dbz.ToString());
        }
    }
}
```

## 24. Create a simple web page to show data in Tree view control and datalistusingweb.Sitemapfile containingnavigationinformation.

Design:

```
<%@PageLanguage="C#" AutoEventWireup="true" CodeFile="Default3.aspx.cs" Inherits="Default3"%>

<!DOCTYPEhtml>

<htmlxmlns="http://www.w3.org/1999/xhtml">
<headrunat="server">
    <title></title>
</head>
<body>
    <formid="form1"runat="server">
        <div>
            <asp:TreeViewID="TreeView1"runat="server"DataSourceID="SiteMapDataSource1">
                </asp:TreeView>
                <asp:SiteMapDataSourceID="SiteMapDataSource1"runat="server">
            </asp:SiteMapDataSource>
        </div>
    </form>
</body>
</html>
```

Sitemap:

```
<?xmlversion="1.0"encoding="utf-8"?>
<siteMapxmlns="http://schemas.microsoft.com/AspNet/SiteMap-File-1.0">
    <siteMapNodeurl="Numan.com"title=""description="Numan">
        <siteMapNodeurl="yahoomail.com"title="yahoomail"description="mail">
        <siteMapNodeurl="sportsnews1.com"title="sports1"description="sports"/>
    </siteMapNode>
    <siteMapNodeurl="yahooneews.com"title="yahooneews"description="news">
        <siteMapNodeurl="sportsnews.com"title="sports"description="sports"/>
        <siteMapNodeurl="gloabalnews.com"title="global"description="gloabal"/>
    </siteMapNode>
</siteMapNode>
</siteMap>
```

## 25. Display the no. of visitors on a given webpage.

### Default.aspx:

```
<%@Page Language="C#" AutoEventWireup="true" CodeFile="Default4.aspx.cs" Inherits="Default4"%>
```

```
<!DOCTYPE html>

<html xmlns="http://www.w3.org/1999/xhtml">
<head runat="server">
    <title></title>
</head>
<body>
    <form id="form1" runat="server">
        <div>
        </div>
    </form>
</body>
</html>
```

### Code:

```
using System;
using
System.Collections.Generic; using
System.Linq;
using
System.Web; using Syst
em.Web.UI;
using System.Web.UI.WebControls;

public partial class Default4 : System.Web.UI.Page
{
    protected void Page_Load(object sender, EventArgs e)
    {
        Response.Write(Application["usercount"].ToString());
    }
}
```

### Global.asax:

```
<%@ Application Language="C#" %>
```

```
<script runat="server">

    void Application_Start(object sender, EventArgs e)
    {
        //Code that runs on application startup
    }

    void Application_End(object sender, EventArgs e)
    {
        //Code that runs on application shutdown
    }

    void Application_Error(object sender, EventArgs e)
    {
        //Code that runs when an unhandled error occurs
    }

    void Session_Start(object sender, EventArgs e)
    {
        Application.Lock();
        Application["usercount"] = Convert.ToInt32(Application["usercount"]) + 1;
    }
}
```

```
        Application.Unlock();  
    }  
    void Session_End(object sender, EventArgs e)  
    {  
    }  
</script>
```

**27. Create a registration form having text fields for accepting, Name, Age, Email, Address and Mobile number. Perform the following validations for the same:**

- 1. All fields need to be filled compulsorily**
- 2. Names should contain only alphabets and should not be more than 25 characters long**
- 3. Validate email and mobile number appropriately**
- 4. Age should be between 18 and 32 only.**

**Include submit and cancel buttons. On click of submit button, open a new page and display all the information entered by the user and on click of cancel button, all text fields should be cleared.**

**Design:**

**Default.aspx:**

```
<%@Page Language="C#" AutoEventWireup="true" CodeFile="Default.aspx.cs" Inherits="_Default"%>

<!DOCTYPE html>

<html xmlns="http://www.w3.org/1999/xhtml">
<head runat="server">
    <title></title>
    <style type="text/css">
        .auto-style1 {
            text-align:
            center; color:
            #006600; font-
            size: large;
        }
        .auto-style2
        { width: 85px;
        }
    </style>
</head>

### Default2.aspx.cs

```

usingSystem;
using
System.Collections.Generic;using
System.Linq;
using
System.Web;usingSyst
em.Web.UI;
usingSystem.Web.UI.WebControls;

publicpartialclassDefault2 :System.Web.UI.Page
{
    protectedvoidPage_Load(objectsender,EventArgs)
    {
        Response.Write(Request.QueryString["na"]+"<br>");
        Response.Write(Request.QueryString["ag"]+"<br>");
        Response.Write(Request.QueryString["em"]+"<br>");
        Response.Write(Request.QueryString["ad"]+"<br>");
        Response.Write(Request.QueryString["Ph"]+"<br>");
    }
}

```

**30. Create a web page with a multiline text box and two buttons, viz. saveContents and loadContents. On click of saveContents button, contents from the text box should be retained and on click of loadContents button, the previously saved contents should be displayed back on the text box.**

**Design:**

**Codes:**

```
<%@Page Language="C#" AutoEventWireup="true" CodeFile="Default6.aspx.cs" Inherits="Default6"%>

<!DOCTYPE html>

<html xmlns="http://www.w3.org/1999/xhtml">
<head runat="server">
    <title></title>
    <style type="text/css">
        .auto-style1 {
            text-align: center;
        }
    </style>
</head>
<body>
    <form id="form1" runat="server">
        <div class="auto-style1">
            <h1>
                <asp:TextBox ID="TextBox2" runat="server" CssClass="auto-style1"
Height="129px" TextMode="MultiLine" Width="239px"></asp:TextBox>
                <asp:Button ID="Button1" runat="server" OnClick="Button1_Click" Text="SaveContent"/>
                &nbsp;
                <asp:Button ID="Button2" runat="server" OnClick="Button2_Click" Text="LoadContent"/>
            <br/>
            SatyamGupta</h1>
        </div>
    </form>
</body>
</html>
```

```
</div>

</form>
</body>
</html>
C#code:
using System;
using
System.Collections.Generic;using
System.Linq;
using
System.Web;using Syst
em.Web.UI;
using System.Web.UI.WebControls;

public partial class Default6 : System.Web.UI.Page
{
    string data = "";
    protected void Page_Load(object sender, EventArgs)
    {
    }
    protected void Button1_Click(object sender, EventArgs)
    {
        ViewState["data"] = TextBox2.Text;
        TextBox2.Text = "";
    }
    protected void Button2_Click(object sender, EventArgs)
    {
        TextBox2.Text = ViewState["data"].ToString();
    }
}
```

**31. Store 3 objects of the furniture class having 3 data members (name,manufacturer, and cost) in 3 session objects. Display a panel to include alistbox displaying the names of all three furniture objects, and a buttonnamed “MoreInformation”. On click of the button retrieve the selectedobject(fromlistbox) informationand display itina label.**

#### **Codes:**

```
<%@PageLanguage="C#" AutoEventWireup="true" CodeFile="Default7.aspx.cs" Inherits="Default7"%>
```

```
<!DOCTYPEhtml>

<htmlxmlns="http://www.w3.org/1999/xhtml">
<headrunat="server">
    <title></title>
    <style
        type="text/css">#for
        m1 {
            text-align:center;
        }
        .auto-
        style1 { color:#66
            FFCC;
        }
    </style>
</head>
<body>
    <formid="form1"runat="server">
        <div>
            </div>
            <asp:ListBoxID="ListBox1"runat="server"></asp:ListBox>
            <asp:Button ID="Button1" runat="server" OnClick="Button1_Click" Text="Button"
        />&nbsp;<asp:LabelID="Label1"runat="server"Text="Label"></asp:Label>

            <br/>
            <br/>
            <br/>
            <spanclass="auto-style1">CodeBySatyam</span></form>
    </body>
</html>
```

#### **CsCode:**

```
usingSystem;
using
System.Collections.Generic;using
System.Linq;
using
System.Web;usingSyst
em.Web.UI;
usingSystem.Web.UI.WebControls;
publicpartialclassDefault7 :System.Web.UI.Page
{
    protectedvoidPage_Load(objectsender,EventArgse)
    {
        if(!IsPostBack)
        {
            Session["s1"] = new Furniture("chair1", "xyz1",
            "1001");Session["s2"] = new Furniture("chair2", "xyz2",
            "1002");Session["s3"] =newFurniture("chair3","xyz3",
            "1003");

            ListBox1.Items.Add(((Furniture)Session["s1"]).name);
            ListBox1.Items.Add(((Furniture)Session["s2"]).name);
            ListBox1.Items.Add(((Furniture)Session["s3"]).name);
        }
    }
}
```

```

protected void Button1_Click(object sender, EventArgs e)
{
    if (ListBox1.SelectedIndex != -1)
    {
        if (ListBox1.SelectedIndex == 0)
        {
            Label1.Text = ((Furniture)Session["s1"]).money; Label
            1.Text = ((Furniture)Session["s1"]).cost;

        }
        elseif (ListBox1.SelectedIndex == 1)
        {
            Label1.Text = ((Furniture)Session["s2"]).money; Label
            1.Text = ((Furniture)Session["s2"]).cost;

        }
        elseif (ListBox1.SelectedIndex == 2)
        {
            Label1.Text = ((Furniture)Session["s3"]).money; Label
            1.Text = ((Furniture)Session["s3"]).cost;

        }
    }
}

```

```

class Furniture

```

```

{

    public string
    name; public string
    money; public string c
    ost;

    public Furniture(string name, string money, string cost)
    {
        this.name =
        name; this.money =
        money; this.cost = cost
        ;
    }
}

```

### 32. Write a program in C# to demonstrate multiple inheritance using interfaces.

**Code:**

```
using System;
public class Program
{
    public interface common
    {
        void Displayed();
    }
    public class A : common
    {
        public void Displayed()
        {
            Console.WriteLine("This is the method of Class A");
        }
    }
    public class B : common
    {
        public void Displayed()
        {
            Console.WriteLine("This is the method of Class B");
        }
    }
    public static void Main()
    {
        Console.WriteLine("Code by Satyam 09"); Console.WriteLine("Multiple Interface Using Interface"); common
        c; c = new A(); c.Displayed(); c = new B(); c.Displayed(); Console.ReadLine();
    }
}
```
